

Insurance in the digital world: cyber, data and technology – from hype to reality

**Thursday 19th October 2017
etc Venues St. Paul's, 200 Aldersgate St, London,
EC1A 4HD**

The ABI's 2017 Data Conference will take place on Thursday 19th October. Over the last two years digitisation has continued to accelerate, and is increasingly revolutionising all aspects of insurance and savings firms' businesses. Technology is facilitating new operating models and new customer relationships, huge volumes of data provide insights firms have never had access to before, and cyber risks create both operational and underwriting challenges to engage with.

At this conference you will:

- hear strategic keynotes from industry leaders;
- engage with industry experts on how AI and Blockchain are transitioning from hype to operational reality;
- understand the implications of the General Data Protection Regulation, six months out;
- learn about developments in the cyber insurance market;
- network with your peers from across the sector.
