

Automated Vehicles: to ALKS and beyond...

Wednesday 19th October 2022

**Association of British Insurance, One America Square,
17 Crosswall, London, EC3N 2LB**

The Automated Lane Keeping System (ALKS) is the first technology deemed to be self-driving by the UK Government. ALKS is already on sale in Germany and is slated for imminent arrival onto UK shores. What does the insurance industry and the wider ecosystem need to know in advance to properly manage automated vehicle claims?

Yet ALKS is only the first step in the automated driving revolution. We know that SAE level 4 technologies such as Auto Pilot are on the horizon and several companies are exploring the capabilities of automated pods without a safety driver. How can we also start preparing for these, and other, advancements?

13:05	Registration and Networking
13:35	Welcome
	Chair of Conference: Mark Shepherd, Assistant Director, Head of General Insurance, ABI
13:40	Keynote Address One (20min + 10min Q&A)
